H2020-SCC-01-2015 Lighthouse	HabiDat Changing Habits & Reaching Energy Efficiency through Multi-Sided Data Markets	Awaiting outcome October	HabiDat is a pan-European initiative to achieve energy efficiency in cities through local solutions and exploitation of data markets. Our aim is to produce and test innovative solutions in mobility, energy and infrastructure, which are integrated by using an open marketplace for data exchange and exploitation. HabiDat integrates data from different sectors by using OneM2M – a global standard for the Internet of Things (IoT) – to ensure international transferability of solutions and a fair and sustainable share for cities and other partners providing or using data and services. In addition, HabiDat provides platform adaptors to ensure further integration with cities using other IoT standards such as FiWare and HyperCat.	Nikki Spencer - Digital Birmingham	100% funded
H2020-EURO-6-2015	ECLIPSE Empowering Citizens, Localities and Industries in Public Services Systems for Europe	Awaiting outcome September	The aim of this Research and Innovation Action is to create a more effective and efficient, societal-centric service delivery model to drive public sector transformation and adaptation based on societal challenges through the use of LEADing Practice standards and semantic web technologies. Birmingham will work with the Universities to identify and develop a new digital model which can be used to help the City identify its challenges and engage with its citizens using a semantic ontologies approach. For example it will enable the City to identify specific challenges or issues within a specific area (one geographical area e.g. Selly Oak) and identify how citizens use their own technology to communicate, interact and converse with each other within an area based on specific issues. This would ultimately enable the City to identify and if necessary be able to refocus any services on specific issues that are being identified by citizens themselves and	Annette King - Digital Birmingham	100% funded
INTERREG EUROPE	PURE COSMOS Public authorities Role Enhancing Competitiveness of SMEs	Awaiting outcome December	The Municipality of Genova (IT) proposes a project that will exchange good practices on the role that public authorities can play in enhancing the competitiveness of SMEs by making the business climate more transparent and reliable. PURE COSMOS will run for 5 years (=10 semesters). Semesters 1-6 will be the active phase: good practice exchange will lead to a concrete Action Plan for each project-partner. Semesters 7-10 will be the monitoring phase required by the Programme.	Annette King - Digital Birmingham	85% funded
	ELISABETH	Awaiting outcome October	Personalising public services around the citizen. Place shaping - Better civic participation and engagement	Nicola Bryant - Digital Birmingham	
H2020-SCC-03-2015	FAST-SCC Facilitating system Standards for Smart Cities and Communities	Awaiting outcome November	Creating interoperability standards for smart cities, dealing with emerging standards and technologies. FAST-SCC will specify with the support of the demand-side stakeholders of the SCC community an interoperability practice framework. It will then organise within this framework the development of essential SCC standards of to ensure interoperable solutions in SCC as well as open and consistent data, focusing on vertical interoperability.	Nikki Spencer - Digital Birmingham	100% funded
